

## Instructions iLOQ key

### HOW DOES THE iLOQ LOCK AND KEY WORK

The lock and key work without batteries, because the encrypted locking system is powered by key insertion. Access rights are programmed into your key and they can, if required, be changed. Locks and keys are fully programmable, so, for instance, a lost key can be quickly and easily removed from the system.

### USING THE KEY

Insert the key all the way into the lock cylinder and turn. If the lock does not open, remove the key and repeat the procedure with a slower, more steady motion so that the lock has time to recognize your key.

### HOW DO I TAKE CARE OF MY KEY?

The key has no battery and it is made out of stainless steel. It withstands hard wear, water and cold temperatures. An iLOQ key is maintenance free. If the key is dirty, it can be cleaned with a soft cloth.

### WHAT HAPPENS IF I LOSE MY KEY?

Immediately notify the person responsible for key management. The locks will be updated and the lost key will no longer provide access. The security level of the building is restored.

### WHERE DO I GET A NEW KEY?

Contact the person responsible for key management. Your new key will be quickly programmed.

### NB!

Do not use the iLOQ key for other purposes except those mentioned in these instructions. Do not insert any other item than an iLOQ key into the iLOQ cylinder. The key may not be modified in any way. Discarded keys and locks can be recycled as scrap metal.
